Generative AI

Generative AI and Large Language Models like ChatGPT are here to stay. But what does this mean for Higher Education? How will we maintain robust assessment practices when ChatGPT can write an essay for you? How can we use generative AI in the classroom? And how can we ensure we, and our students, are using it critically and ethically?

The Educator Development team have already developed workshops and resources on the following Generative AI topics. We are always developing new workshops and resources, and can also develop bespoke training and support with you.

- **An introduction to generative AI** - This short session introduces staff to generative AI, Large Language Models (LLMs) like ChatGPT, what they can do and how to use them.
- **An introduction to using generative AI in the classroom** - This workshop introduces ways that colleagues across the institution and the sector are using generative AI in the classroom, to teach student AI literacy as well as improve student learning.
- **Using generative AI to design learning** - This workshop will introduce a range of ways for you to use generative AI to plan your teaching, develop resources and ultimately design the student learning experience.
- **Re-imagining assessment in the age of generative AI** - This session will help colleagues to reflect on and re-imagine their assessment practice in light of the challenges presented by generative AI.
- **Generative AI and inclusion** - This short session will introduce the ways in which generative AI can be used to promote inclusion, particularly for disabled, neurodiverse and international students.
- **Developing critical and ethical AI literacy** - This workshop will explore the ethical issues and challenges with generative AI, and how to develop critical and ethical AI literacy for yourself, and your students.

We also have an [AI hub](#) on the Education Toolkit.
