Depth:

Date:

Surveyor:

**Transect No:**

Species	Area cover (cm <sup>2</sup> )	Total
<b>Cliona aprica</b> Dark brown - fields of papillae, merging		
<b>Cliona caribbaea</b> Brown - continuous tissue		
<b>Cliona tenuis</b> Brown - very thin, almost transparent layer of continuous tissue		
<b>Cliona varians</b> Brown, osculae light yellow - thick continuous tissue or free-living sponge		
<b>Cliona delitrix</b> Dark orange to bright red - continuous, knobby tissue, large fleshy exhalents		
<b>Siphonodictyon coralliphagum</b> Yellow - fleshy chimneys, often from live coral		
Individual exhalent fistule diam (mm)		
Individual inhalent fistule area (mm <sup>2</sup> )
